

[01] THE OPPORTUNITY

Every bottle has its moment.
Most restaurants miss it.

\$180B

global wine-in-restaurants
market

500K–1.5M

installations across premium
restaurants & hotel F&B

25–40%

of revenue in fine-dining
comes from wine

THE PROBLEM

Sommeliers manually track temperature and aeration across tables —
a memory-intensive, error-prone workflow.

A wine served at the wrong temperature **costs the experience, and the restaurant**: bottles returned, ratings dropped.

No intelligent solution exists per-bottle — **the gap sits between a \$15 thermometer and a \$10,000 cellar system.**

*The moment a bottle is ready is invisible.
Sommelier Node makes it unmissable.*

[02] THE DESIGN STRATEGY

Built for the brand. Built for scale.

WHAT VORWERK GAINS

[1]

A NEW REVENUE LINE

Vorwerk sells hardware once. The SaaS subscription opens a recurring B2B revenue stream the portfolio doesn't have today.

Revenue that compounds, not a one-time sale.

[2]

ONE DEVICE, ONE APP

A physical clip-on sensor, paired with a single dedicated app that serves both the sommelier on the floor and the owner in the office.

One product to build, market, and support.

[3]

AI-COMMERCE READINESS

The landing page is machine-readable by AI shopping assistants and voice search from day one, at no extra engineering cost.

Future-proof distribution, day one.

WHAT OWNERS GAIN

- **Waste reduction** — fewer bottles returned or comped for temperature error
- **Analytics dashboard** — revenue by wine type, serving accuracy, hourly volume
- **Consistent standards** across every shift and every server
- **One scalable system** for any cellar size

WHAT SOMMELIERS GAIN

- **Real-time temperature & aeration**, per bottle, no guesswork
- A **"Ready to pour" alert** at the exact right moment
- No more **manual tracking** across multiple tables
- **Confidence at the table** on every recommendation

[03] THE BUSINESS CASE

Hardware + SaaS.
A platform, not a product.

\$129

hardware, per device

\$49/mo

SaaS, per restaurant

A 30-node restaurant: **\$3,870** hardware + **\$588/yr** SaaS.
Recurring revenue from day one, hardware as the acquisition channel.

WASTE REDUCTION

2 fewer wrong-temperature incidents a month at \$80/bottle = **\$1,920/yr** recovered — more than the SaaS cost.

UPSELL MOMENT

"Ready to pour" arrives at the exact right moment — a confident, timely recommendation at the table.

TRUST SIGNAL

A sommelier with a Node is visible precision. Premium guests pay for the ritual, not just the liquid.

Thermomix owns the kitchen; Sommelier Node owns the table — the premium food-ritual brand, from prep to pour.
